of Brazilian Hardwoods**

DECKING - FLOORING - SIDING

Brazilian Wood Depot

Brazilian Wood Depot is a direct importer of Brazilian Hardwoods and maintains a reliable supply of the highest quality materials for decking, railing, siding, and plank flooring.

We offer fasteners, finishes and technical support to suppliers, contractors and home owners looking for the best products at the best prices. Our quality lumber is RealWood™ certified and we stand behind our fasteners, finishes and accessories as being the highest quality products for the task at hand.

Brazilian Wood Depot specializes in Brazilian Hardwoods and, in doing so, only carries high-quality Brazilian Hardwood lumber. All of our wood is 100% RealWood™ certified. That means, 100% Natural- no treatments, no preservatives, no chemicals and 100% biodegradable. Brazilian Hardwoods don't need chemical treatments for longevity. They are naturally resistant to rot, decay and insect attack.

Find more information at www.bwdepot.com and click the video below to watch a short, 90 second video of the benefits of Brazilian Hardwoods.

Species Guide

Ipé Brazilian Walnut

Ipé is olive-brown to dark-brown in color. Ipé is one of the hardest and most durable woods found anywhere in the world. A fantastic choice for decking, flooring, and siding, as well as other commercial applications due to its strength and longevity. **Janka Hardness: 3680**

Cumaru Brazilian Teak

Cumaru Rosa hardwood is a reddish brown to deep, cherry red, with beautiful grain patterns. Used interchangeably with Ipe because of its comparable strength, hardness and high resistance to wear, rot and insects. **Janka Hardness: 3540**

Massaranduba Brazilian Redwood

Massaranduba is a beautiful plum red tinted to reddish-brown color. It's known for a lack of visible knots, and a consistent grain with subtle demarcation partially due to the dark, deep color. This wood starts plum and ages to a deep, Hershey's brown. **Janka Hardness: 3190**

Purpleheart

Named for its characteristic vibrant purple, red and pink colors when first cut. Red, purple and pink hues turn to shades of brown when exposed to sunlight. It begins to look similar to Ipe after 7-10 days of sunlight exposure. **Janka Hardness: 3630**

Tigerwood

Named for its characteristic blonde-brown stripes. The blonde color will darken and display deeper, reddish hues over time when used outdoors. The unique "tiger" stripes make Tigerwood a one of a kind choice for a variety of applications, however is not recommended for use in all day sun exposure. **Janka Hardness: 2170**

Garapa

Garapa is a blonde or wheat-brown which will also darken and become an amber-tinted brown over time. Garapa wood is used for everything from flooring to decking to cabinet work and heavy carpentry applications -- even ship building. **Janka Hardness: 1650**

Plank Flooring

Standard flooring boards normally provide an even spread of lengths from 1' - 7' long. Hardwood plank flooring has much longer boards that range from 6' - 14' long. These longer planks enhance the beauty in the wood grain. White and Red Oak, common hardwood flooring species, have a 1360 and 1260 Janka hardness rating respectively which makes them less resistant to normal wear. Hardwood flooring made from Brazilian Hardwood flooring is substantially harder than domestic wood flooring and will far outlast any other wood-flooring option, even outliving the life of the home.

Decking

Brazilian hardwoods offer beauty, durability and strength that other decking options cannot match. Brazilian Hardwood Decks are naturally resistant to rot, decay, insect attack and sagging between joists, characteristics that no other deck material can offer. Having a variety of colors, Brazilian wood species allow homeowners and contractors to choose the best hardwood for their decking plans.

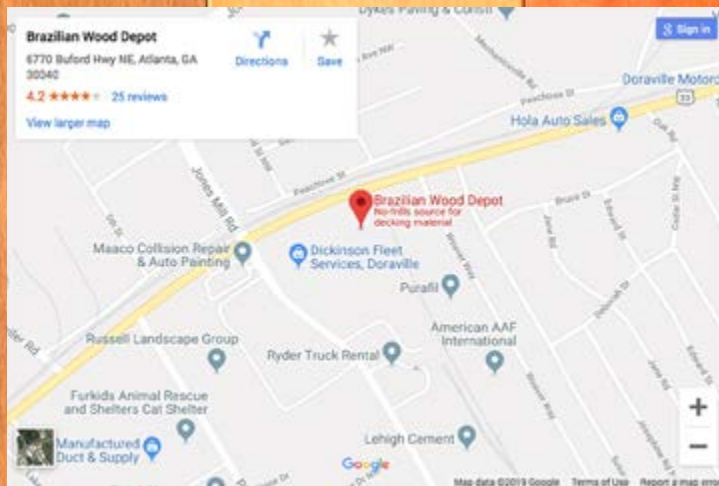

Siding

Rainscreen siding of Ipe, Purpleheart, Massaranduba and other premium hardwoods is unique in appearance and many choices are available for color preference. Brazilian Hardwood lumber is rated to last a lifetime - 40 to 100 years - and provides better protection from mold than other siding materials. Brazilian Hardwoods will remain durable and rot resistant for a lifetime with minimal care, however, as with all Brazilian Hardwoods, finish application is required for color maintenance.

Commercial Applications

The Southeast's Premier Importer of Brazilian Hardwoods
